Static HTML · LiteSpeed

BUSINESS TYPE

SaaS — website builder (India)

Contents & Executive Summary

1 — Executive Summary	2
2 — Category Scores & Core Web Vitals	3
3 — Critical Findings	4
4 — Technical SEO & Mobile	5
5 — Content, Architecture & Schema	6
6 — AI Search (GEO) & Search Experience (SXO)	7
7 — Prioritized Recommendations	8
8 — Roadmap & Methodology	9

Where the site stands

newweb.ai is one of the better-executed small SaaS sites we audit: all 104 sitemap URLs return 200, marketing pages are fully server-rendered with deep, genuinely differentiated content (city pages share only ~35% text — not doorway pages), schema coverage is broad (Organization, WebSite, Product, HowTo, FAQPage, WebApplication), and lab performance is near-perfect (Lighthouse 99 mobile, LCP 1.0s, HTTP/3).

Four problems hold it back. First, **the entire blog is client-side rendered** — raw HTML contains unresolved `{...}` template strings, so Bing and every AI crawler index empty shells, and the posts use query-string URLs. Second, **there is no mobile navigation menu at all**: on phones the nav collapses to logo + two buttons, leaving Pricing and Features unreachable except via 27px footer links. Third, **content cannibalization**: four assets compete for "local SEO India" and three for Google Business Profile queries. Fourth, **a March 2026 CMS migration broke the old link graph** — blog.newweb.ai returns 403, legacy WordPress URLs 404 in bulk, and Common Crawl's view of the site collapsed from 79 pages to 1.

The good news

Week-one fixes (redirects, sitemap, social image, schema disambiguation, llms.txt, GSC submission) plus the blog SSR migration are estimated to lift the score from **64 to roughly 78**. The long pole is off-page: Newweb appears in zero "best website builder India" listicles and has no G2/Capterra review presence — and those page types own the head-term SERPs.

2 — Category Scores

Core Web Vitals (lab — local Lighthouse)

METRIC	HOME MOBILE	HOME DESKTOP	PRICING MOBILE	STATUS
Lighthouse Performance	99	92	92	EXCELLENT
Largest Contentful Paint	1.0 s	1.5 s	1.6 s	GOOD
Cumulative Layout Shift	0.021	0.058	0.161	PRICING ⚠
Total Blocking Time	100 ms	0 ms	10 ms	GOOD
Time to First Byte	20 ms	20 ms	80 ms	GOOD

No CrUX field data exists for this origin yet; PageSpeed Insights API was quota-limited. HTTP/2 + HTTP/3 (QUIC) confirmed. Only CWV action items: pricing-page CLS (reserve layout space) and font preloading.

AI search platform readiness

PLATFORM	SCORE	PRIMARY BOTTLENECK
Google AI Overviews	48	Blog invisible (CSR); FAQ answers 16–51 words vs 134–167 optimum; no sameAs
ChatGPT (web search)	38	No llms.txt; no Wikipedia/Crunchbase entity; brand collision with Neweb Technologies (Taiwan)
Perplexity	52	SSR marketing pages help; statistics unattributed
Bing Copilot	44	No Knowledge Graph entity; blog shells indexed empty

3 — Critical Findings

#1 — The blog is invisible to search engines and AI crawlers

The raw HTML of `/pages/blog` and every blog post contains literal unresolved JavaScript template strings (`<h1>${esc(p.title)}</h1>`); the content loads client-side from `/api/blogs` . Googlebot renders JS late and at low priority; Bing and all AI crawlers (GPTBot, ClaudeBot, PerplexityBot) index 200-word empty shells. The posts also use query-string URLs (`?slug=...`) with JS-injected canonicals and zero schema. All four published posts — including two caught in cannibalization clusters — generate no organic or AI value today.

Fix: pre-generate static HTML per post at `/pages/blog/<slug>` with server-rendered meta + `BlogPosting` schema; 301 the old URLs.

CRITICAL No mobile navigation menu exists

At mobile widths the nav collapses to logo + Sign in + Get Started; no hamburger is present in the DOM on any page. Pricing, Features, and Solutions are unreachable on phones except via 27px-tall footer links roughly 8,000px down the page. This suppresses mobile engagement signals and conversions in a mobile-first market.

CRITICAL www duplicate + trailing-slash duplicates, no redirects

`www.neweb.ai` returns HTTP 200 with identical content (no 301), and trailing-slash variants of every page also return 200. Canonicals are correct, but PageRank splits across live duplicates. Two `.htaccess` rules fix both.

CRITICAL Post-migration link rot: `blog.neweb.ai` → 403, legacy URLs → 404

The March 2026 move off WordPress left `blog.neweb.ai` returning a hard 403 and old paths (`/about-us/` , `/tag/*` , `/elementskit-content/*`) 404ing with no redirects. Common Crawl's index of the site collapsed from 79 pages (Jan 2026) to ~1 (May 2026). All pre-migration link equity is currently being discarded.

HIGH Content cannibalization across the two most important topics

Four assets target "local SEO India" (two guides, a Maps guide, and a blog checklist) and three target Google Business Profile queries. Google splits signals across near-duplicates instead of ranking one strong page. Consolidation plan: merge blog posts into their matching guides (301), keep thin hub pages, sharpen the Maps guide to Maps-Pack-only topics.

HIGH Zero third-party authority — and the brand SERP is leaking

Neweb appears in no "best website builder India" listicle, has no G2/Capterra review presence, no press coverage; G2's "Neweb.ai alternatives" page ranks on the brand's own SERP, and "Neweb Technologies" (a Taiwanese hardware firm) owns the entity space. Listicles are the page type that wins the head terms — Neweb cannot rank there without being included.

4 — Technical SEO & Mobile (61 · CWV 90)

Issues

SEVERITY	FINDING	FIX
CRITICAL	Blog CSR + query-string URLs + JS canonicals	Static per-slug HTML, clean paths, 301s
CRITICAL	www 200-duplicate; trailing-slash 200-duplicates	.htaccess 301 rules
HIGH	blog.neweb.ai → 403; WP-era URLs → unmapped 404s	Wildcard 301 to /pages/blog; map /about-us/, /tag/*; 410 /elementskit-content/*
HIGH	/pages/why-neweb missing from sitemap; lastmod batch-stamped on 50 URLs (one millisecond timestamp)	Add page; real per-page dates or drop lastmod; remove changefreq/priority
MEDIUM	og:image is an SVG (social previews broken everywhere); twitter:image/title/description absent	1200×630 raster + full Twitter card set
MEDIUM	20 footer hrefs lack leading slash ("pages/...")	href="/pages/..." — latent path bug
MEDIUM	No CSP header; HSTS missing preload; fetchpriority=high wasted on 100×40 logo	CSP Report-Only first; preload fonts instead
LOW	HTML cache max-age=0; IndexNow absent	max-age=300; IndexNow key + ping on publish

What passes

- All 104 sitemap URLs return HTTP 200 — zero broken entries
- Marketing pages fully server-rendered, correct self-canonicals
- Security headers largely present (XCTO, XFO, Referrer-Policy, Permissions-Policy, HSTS+includeSubDomains)
- HTTP/2 + HTTP/3 (QUIC); static assets immutable, 1-year cache
- robots.txt clean; sitemap declared; GSC verified via DNS
- 404s return true 404 status; viewport meta correct; no horizontal overflow

Mobile findings (from screenshots, Playwright)

- **No hamburger menu** — the defining mobile failure (see Critical #2).
- Tap targets: footer links 27px, logo link 28px, currency toggle 30px — all below the 44px minimum.
- Fonts: dominant body sizes 13–14px with clusters at 9–12.5px (35 instances of 9.5px on the tools page).
- Pricing mobile: first plan CTA sits at 880px in an 844px viewport — no conversion button above the fold; CLS 0.161.
- Several CTA links have empty accessible text (screen readers get nothing; anchors carry no signal).

- Above-fold composition is otherwise strong: H1, value prop, dual CTAs, and "Trusted by 1,000+" row all in-fold on desktop and mobile.

5 — Content, Architecture & Schema (64 · 58 · 68)

Page inventory (key pages)

PAGE	WORDS	FLESCH	SCHEMA TYPES
/ (home)	1,668	49	Organization · WebSite · FAQPage · SoftwareApplication
/pages/pricing	499	—	Product (₹249–₹1299) · FAQPage · Breadcrumb
/pages/guides/how-to-do-local-seo-india	2,054	26	HowTo · Article · FAQPage · Breadcrumb
/pages/tools/business-name-generator	1,615	53	WebApplication · FAQPage · Breadcrumb
/pages/compare/wix	1,605	41	Breadcrumb only
/pages/cities/mumbai · delhi · jaipur	1,100–1,150	25–34	FAQPage · Breadcrumb
/pages/solutions/restaurants · salons	1,645 · 2,178	41–43	Breadcrumb (+FAQPage on salons only)
/pages/about	828	—	none
/pages/blog + posts (raw HTML)	252 / 203	—	none

Key content findings

- **Programmatic templates pass the doorway test:** city pages share only ~35% visible text (14 named Mumbai localities, city-specific copy); solutions 27%; compare 24%. Quality gate: keep ≥60% unique if expanding beyond 10 cities.
- **E-E-A-T gaps:** no individual authors anywhere ("Neweb Team" Organization byline); all three headline statistics unattributed; "Trusted by 1,000+ small businesses" unsubstantiated; about page has substance but zero schema.
- **Readability heavy:** guides and city pages score Flesch 24–34 (college level) for an SMB audience — target 50+.
- **Internal linking 3.5/10:** solutions pages don't link their matching guides; guides link zero tools (the local-SEO guide never mentions Neweb's own local-seo-audit tool); city pages link no guides/tools; compare pages don't link website-cost-india. ~20-link fix matrix in the action plan.
- **Cannibalization:** local SEO ×4 assets, GBP ×3, domain-picking ×2 — merge blog posts into guides (301), keep thin hubs, differentiate the Maps guide.
- **Missing pillars:** no "best website builder India" hub for the 11 compare pages; no payments pillar; no /pages/cities index; 5 solutions verticals lack matching guides.

Schema verdict

Broad, mostly valid coverage — better than typical. Top gaps: Organization missing `sameAs` / `foundingDate` / `areaServed` (entity disambiguation vs the Taiwanese namesake); blog posts have zero schema (blocked by CSR); compare tables are CSS-grid

divs with no ItemList; about page unmarked; FAQPage missing on restaurants (template inconsistency); availableLanguage: "hi" claims Hindi support that doesn't exist — remove or ship Hindi content.

6 — AI Search (GEO) & Search Experience (SXO) (49 · 46)

GEO highlights

- `llms.txt` and `llms-full.txt` : both 404. A ready-to-deploy draft is included in the action plan.
- All AI crawlers receive 200 — fully open; no training opt-out decision has been made.
- FAQ answers sitewide run 16–51 words; the AI-citation optimum is 134–167 self-contained words. Guide body sections run 201–224 words — over the ceiling; split them.
- The Neweb-vs-Wix comparison renders as CSS-grid divs, not a semantic `<table>` — its high-value rows (₹249 vs \$16/mo, GBP automation, WordPress portability) are invisible to AI extractors.
- The brand definition exists only in the meta description, not in crawlable body text.
- Entity risk: "Neweb Technologies" (Taiwan, est. ~2007) owns the Knowledge Graph; no disambiguating sameAs/foundingDate exists. Hindi declared in schema with zero Hindi content — yet Hindi SMB guides ("website kaise banaye") are a near-zero-competition AI citation opportunity.

SERPs read backwards — 5 target queries

QUERY	WHAT RANKS	NEWEB
"ai website builder india"	Hostinger/Wix/MilesWeb product pages + listicles	Absent
"business name generator india"	80% ungated interactive tools (GoDaddy, Namelix)	Absent
"how to make restaurant website india"	How-to editorial (GoDaddy India #1)	Absent
"website builder for small business india"	70% listicles — needs third-party inclusion	Absent
"neweb"	neweb.ai #1, then G2 alternatives page + noise	Partial

Page-type verdicts & personas

- **Name generator — right page type, crawler-blind output:** a real ungated tool with strong editorial, but results render via JS POST; Googlebot sees an empty form while ranking competitors pre-render example output. Fix: static example-output section.
- **City pages — aimed at the wrong SERP:** "website designer mumbai" is won by local agencies with GBP pins, phone numbers, reviews. Retarget to builder intent; add WhatsApp/phone/testimonials; claim a GBP for the registered office.
- **Personas:** trust-seeking shop owner 44/100 (no phone, reviews, WhatsApp) · comparison shopper 56/100 (G2 intercepts the brand SERP) · tier-2 restaurant owner 52/100 (no editorial entry point) · name-first founder 72/100 (best experience on the site).

Domain history matters here

Registered Mar 2024 → parked → WordPress product (Aug 2024) → custom stack (Mar 2026). The migration broke the old URL graph (blog.newweb.ai 403, bulk 404s) and Common Crawl coverage collapsed from 79 pages to 1. Redirect mapping + sitemap resubmission in GSC/Bing is the fastest path to healing crawl coverage.

7 — Prioritized Recommendations

#	PRIORITY	ACTION	EFFORT	IMPACT
1	CRITICAL	Server-render the blog: static HTML per post at clean paths + BlogPosting schema + 301s from ? slug= URLs	2–4 d	Unlocks all content investment, organic + AI
2	CRITICAL	Build a mobile navigation menu (hamburger)	1–2 d	Mobile UX/conversions/engagement signals
3	CRITICAL	.htaccess 301s: www→apex, trailing slash, blog.newweb.ai→/pages/blog, WP legacy paths (410 elementskit)	1–2 h	Stops equity loss, heals migration bleed
4	HIGH	Raster og:image (1200×630) + full Twitter card set; per-page OG images later	2–4 h	Every social share currently renders broken
5	HIGH	Sitemap: add /pages/why-newweb, real lastmods, drop changefreq/priority; fix 20 footer hrefs	2 h	Crawl trust
6	HIGH	Organization schema: sameAs + foundingDate + areaServed:India; remove false "hi" language claim	2 h	Entity disambiguation vs Taiwan namesake
7	HIGH	Pre-render example output on generator tool pages + usage social proof	1 d	Makes tools rankable; Googlebot currently sees empty forms
8	HIGH	Create /lms.txt (draft provided); finish GSC setup, add Bing WMT + IndexNow	3 h	AI discoverability + fastest re-indexing
9	MEDIUM	De-cannibalize: merge blog posts into matching guides (301), thin hub pages, Maps-only guide focus	2–3 d	One strong page per topic instead of 3–4 weak
10	MEDIUM	Internal-link matrix (~20 contextual links: solutions↔guides, guides→tools, cities→guides, compare→cost guide)	1 d	Hub-spoke health 3.5/10 → healthy
11	MEDIUM	Schema: FAQPage+Service on all solutions; AboutPage+Person on /about; semantic <table> + ItemList on compare pages; named Person authors	1–2 d	Rich results + AI citation
12	MEDIUM	Citability: FAQ answers → 134–167 words; split 200+-word guide sections; attribute the 3 headline stats; brand definition into body text	2 d	AI Overviews/Perplexity extraction
13	MEDIUM	Authority: G2 + Capterra + reviews, ProductHunt, DevHunt resubmit, Crunchbase, YourStory/Inc42 pitch, listicle inclusion outreach	ongoing	The gate on every head-term SERP
14	MEDIUM	City pages: retarget to builder intent; WhatsApp + phone + local testimonials in hero; claim GBP for registered office	2 d	Local trust signals Newweb can actually win

15	MEDIUM	Mobile fixes: 44px tap targets, ≥ 14 –16px fonts, pricing CTA above fold, pricing CLS, accessible CTA labels	1–2 d	Mobile engagement + a11y
16	LOW	Pillars + spokes: "best website builder India" hub; restaurant how-to article; 5 missing vertical guides; payments pillar; Hindi pilot page; YouTube demo	quarter	Compounding content moat

8 — Implementation Roadmap

PHASE	SCOPE	EXPECTED OUTCOME
Week 1	Items 1–8: blog SSR begun, mobile nav, redirects, social image, sitemap, schema disambiguation, tool output, llms.txt, GSC/Bing/IndexNow	Health score 64 → ~74; blog indexable; migration bleed stopped; duplicates resolved
Weeks 2–4	Items 9–15: de-cannibalization, internal links, schema, citability, directories/reviews, city retargeting, mobile UX	~78; one strong page per topic; first third-party signals; AI citability groundwork
Quarter	Item 16: pillar hub, vertical guides, Hindi pilot, PR/listicle inclusion, YouTube	Competitive presence in head-term and AI SERPs

Methodology

Ten specialist analyses run against the live site on June 10, 2026: technical SEO (all 104 sitemap URLs status-checked, headers, redirects, rendering), content quality & E-E-A-T (16 pages word-counted; programmatic duplication measured via sequence similarity), schema validation (JSON-LD extracted and parsed per page), sitemap audit, performance (local Lighthouse, 3 runs), visual/mobile (Playwright screenshots at 1440×900 and 390×844, tap-target and overflow scans), GEO/AI readiness (llms.txt, crawler UA tests, passage-length citability), SXO (5 SERPs read backwards, 4 persona scorings), off-page (WHOIS, Wayback, 6 Common Crawl collections), and content-cluster architecture (7 clusters, cannibalization, 20-link matrix).

Data limitations

- CWV are lab-only — no CrUX field data exists for this origin; PSI API was quota-limited.
- Backlink metrics at free tier (no Moz/Bing WMT/DataForSEO credentials) — presence/absence evidence only.
- SERP observations are US-localised; India-localised results (Justdial, Sulekha, local packs) likely worsen the city-page mismatch.
- No GSC access at audit time (verification exists; setup incomplete) — ranking absence inferred from SERP observation.

Scoring weights

CATEGORY	WEIGHT	SCORE
